

Sprint 3 Minutes

SCRUM Meeting 1

11/20/2024

Participants:

Soham Nagawanshi

Kevin Zhang

Ryan Kha

Shreyan Satheesh

Bradley James

Russell Rivard

We began by assigning the remaining tasks for the final sprint, as well as getting a status update on items from Sprint 2. Soham finished the associative Post requests, and it is currently in review. He will work on the HTTP client on the React side, as well as lightening the load from Kevin by taking care of the API service and translation API. He does not have any blockers for now. Bradley has finished the written materials for Sprint 2, and will continue his work on the Menu Boards. His main blocker is that he is facing technical difficulties, which makes it difficult to get his display finished, but he will increase the rate of commits to mitigate this. Kevin will continue completing the view and logic on the Manager display, like the Product Usage chart. He does not have any blockers as of now. Ryan has worked on the implementation for the nutritional information for each menu item, and is almost done. He has created some unit tests to ensure the information returned is accurate, and will continue writing more unit tests. His main blocker is that the call to Nutrition returns an extra column within the menu item, so he will be working to get that resolved. Shreyan is working on the Accessibility on the Customer view, such as increasing/decreasing the text size and changing the language by integrating the translation API. He will begin pulling items from the backend, and is not facing any blockers. Russell has made progress on the Kitchen display by figuring out how to get the queues working, and will continue to work on it. His main blocker is that his time will be limited due to duties in the Corps.

SCRUM Meeting 2

11/25/2024

Participants:

Soham Nagawanshi

Kevin Zhang

Ryan Kha

Shreyan Satheesh

Bradley James

Russell Rivard

We began the meeting by assigning any remaining tasks, and then gave a status update. Soham has finished the Get requests, and merged the Put requests onto the main branch. He will work on implementing dynamic menu pricing, and is not facing any blockers. Kevin has finished all items on the Manager display and has merged it onto main. He will finish the UI for the association with the implementation of API services. He has been temporarily blocked by Soham's PR for the Put request, but as it has been approved, he is not facing any blockers right now. Russell was able to get some work on the Kitchen display, and will continue to work on it. His main blocker is army training, which will take a fair amount of time. Ryan has finished the implementation of nutrition, but will need to refactor before sending a PR. His main blocker is refactoring and merging onto the main branch. Bradley has finished the basic layout for the menu boards, and will start adding static nutrition information onto a popup that will appear when the user clicks on a menu item. His blockers are encountering any technical difficulties, and understanding how to get the nutritional information from the backend to prepare for the connection between the frontend and the backend.
